

Master's Degree in nursing ...

Today as I sit in chemistry lab

Looking for the periodic chart tab

After which I'll find some oxygen with mass,

How will this help me with my task

Building everyday onto my knowledge base

Just to put a piece of me in a vase

Where the vase is a caregiver

Ready to take care of the faintest shiver

My future career is coming soon.

Just as soon as complete the BSN toon

My hopes and dreams start to be seen

As I continue to get my master's degree

At age 48 I never thought I could do this

But truly it is a blessing and pure bliss

We do not know what tomorrow may hold

But I do know I will forever be bold

I want to teach and train and inspire

As many to have love, kindness and care

To care for others as if they were their own

Family, friends and people I have never known

Teaching nursing is my all-time dream

It is going to seal the seam

All the lives I can touch

With human kindness and love, oh so much

The numbers are bountiful and too numerous to count

But I know this degree is going to take me to the highest mount.

My future career as an instructor of nursing is going to count!
